

To create a **RESTful API(using Express) with Node.js** including exceptional handling for an eCommerce company which does the following operations.
Mongo Database is recommended.

1. Create a new order by accepting the following JSON payload as a POST request, validate for duplicate orders based on order_id.

Endpoint : /orders/create

```
{  
  "order_id": "123",  
  "item_name": "Samsung Mobile",  
  "cost": "400",  
  "order_date": "2020/12/01",  
  "delivery_date": "2020/12/11"  
}
```

2. Update the order for a specific order ID to update the delivery_date based on the updated value provided to the API, can be GET or POST method.

Endpoint : /orders/update

3. List all orders for a given date in yyyy/mm/dd format.

Endpoint : /orders/list

4. Query for a specific order with Order ID, can be GET or POST method.

Endpoint : /orders/search

5. Delete an order with Order ID.

Endpoint : /orders/delete
